

Biomolecular Thematic Centre: Recent Advances and Future Perspectives

Bachir Balech

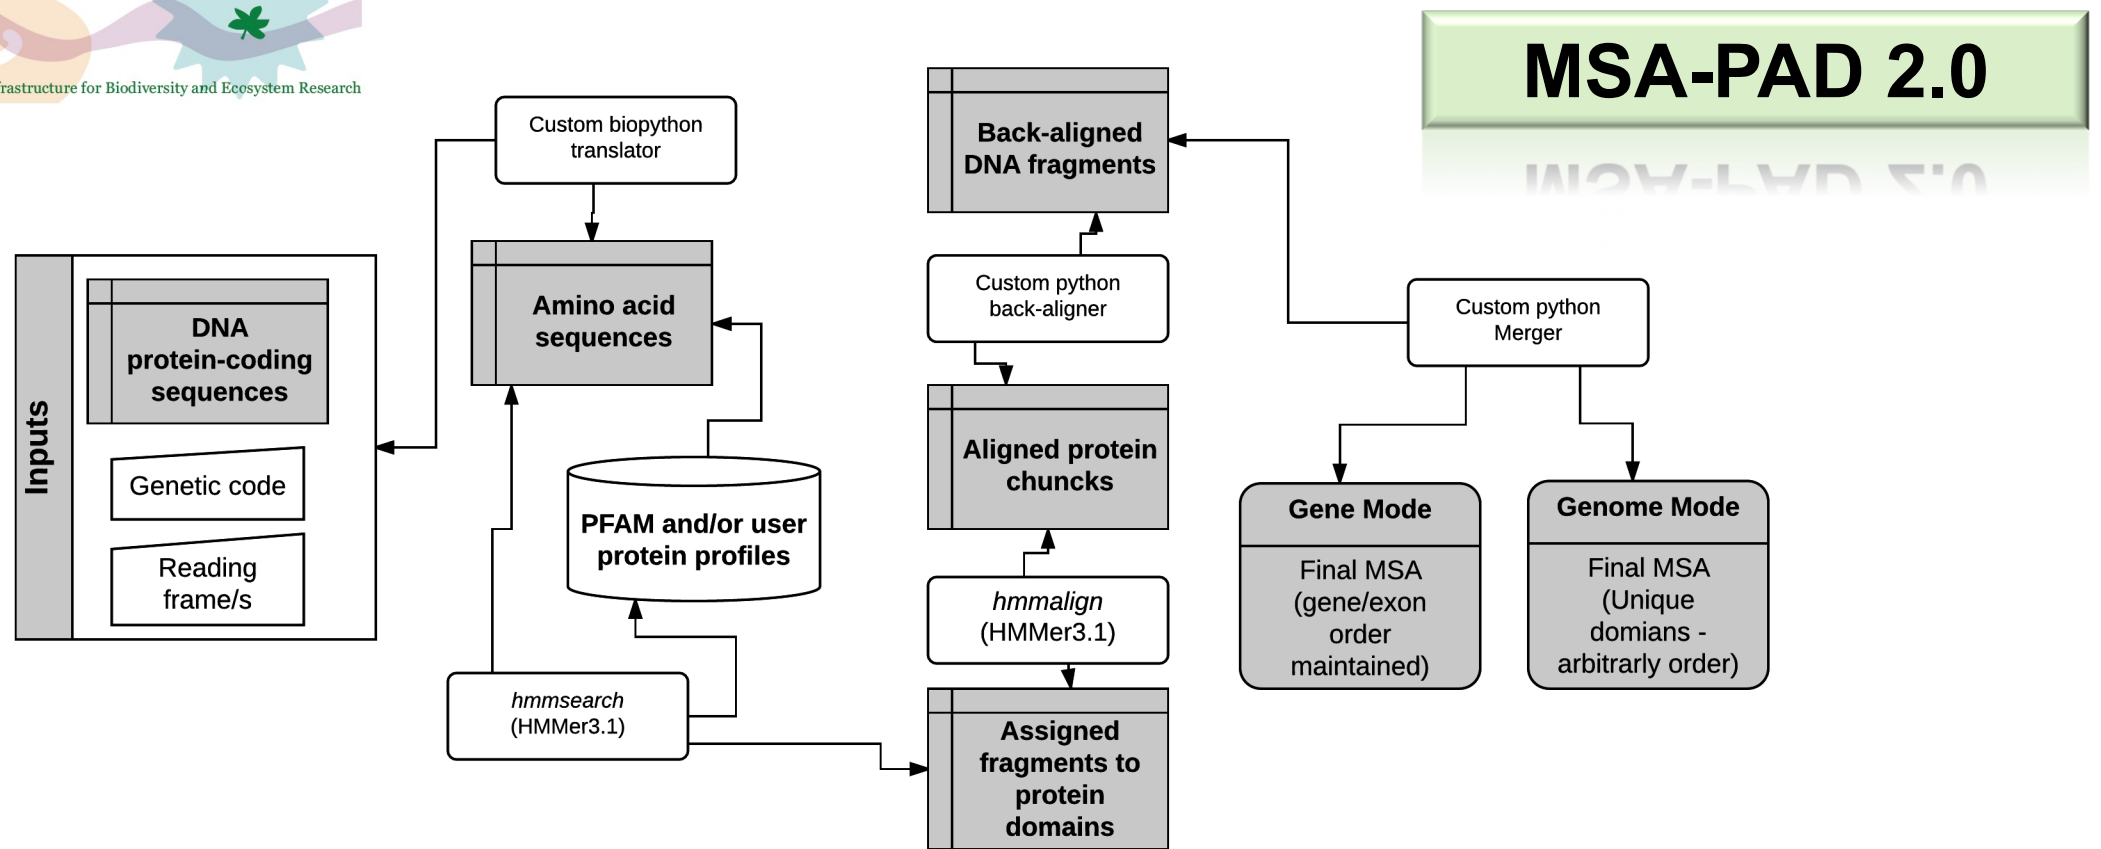

***LifeWatch Annual Conference
Rome, June 25-27 2018***

Achievements

- ✓ DNA multiple alignment: **MSA-PAD 2.0** (upgraded)
- ✓ Meta-barcoding data taxonomic assignment: **BioMaS** (upgraded)
- ✓ Curated and specialized ITS1 database: **ITSoneDB** (upgraded)

Perspectives

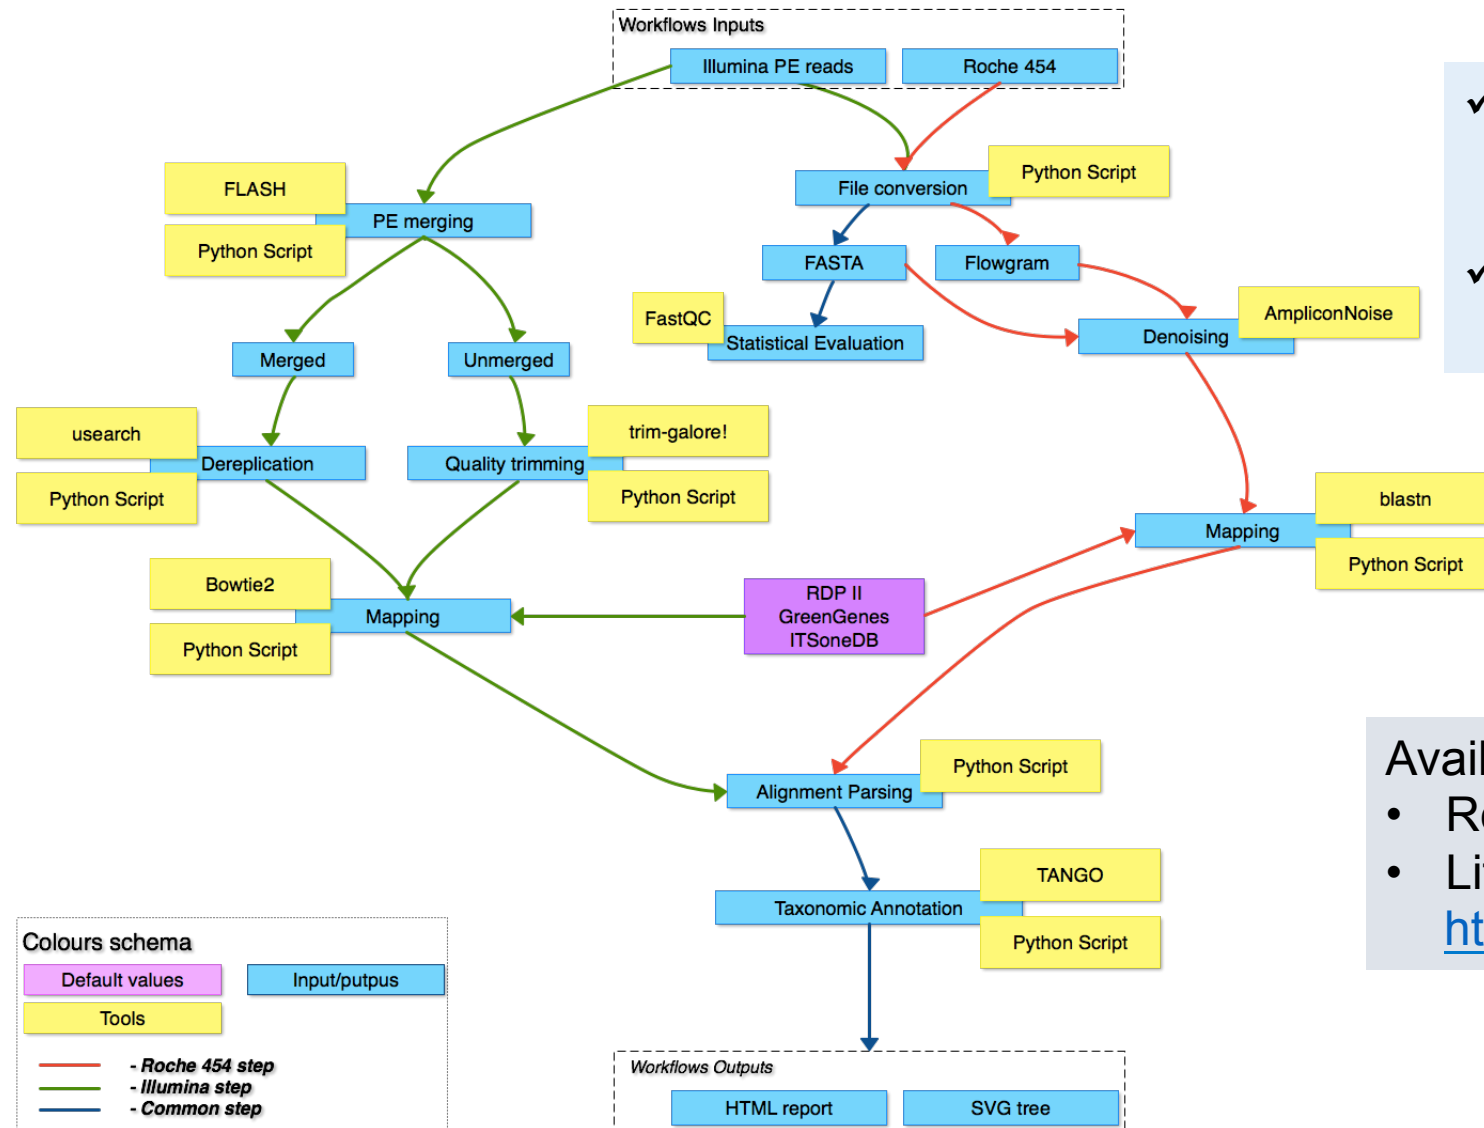

- ✓ DNA barcode markers retrieval tool for plants and animals
 - ☐ **coxI** (mitochondrial)
 - ☐ **rbcL, matK, trnH-psbA** (chloroplastic)

- MSA-PAD aligns DNA sequences encoding either for single or multiple protein domains
- It uses PFAM or user-defined protein profiles to guide DNA alignments
- Available at ReCaS data center (<http://recasgateway.ba.infn.it/>) and LifeWatch Italy portal (<http://www.servicecentrelifewatch.eu/msapad>)

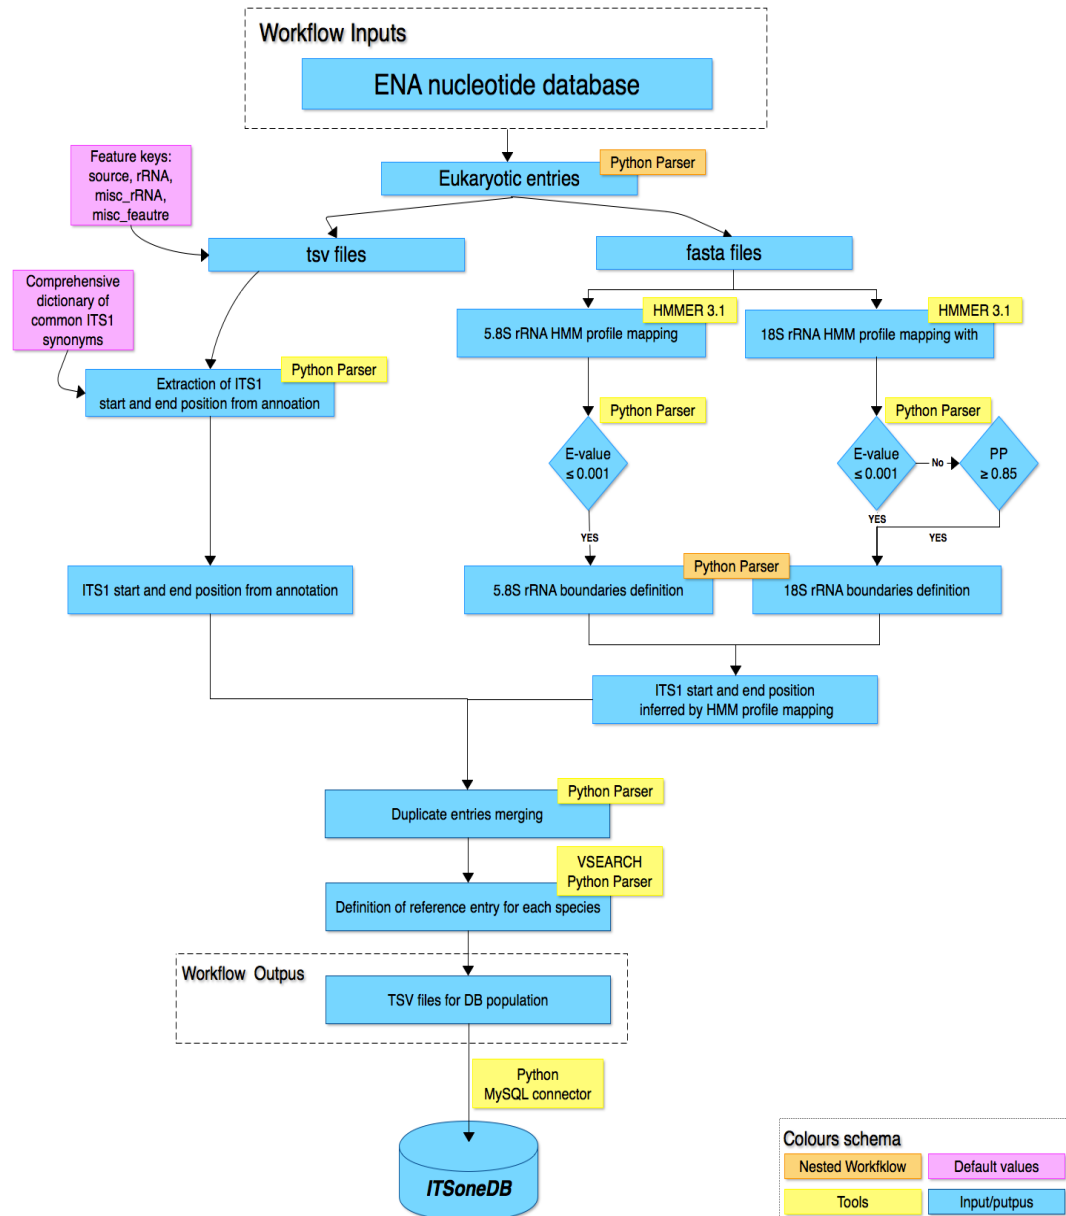

BioMaS

- ✓ Bioinformatic analysis of Metagenomic AmpliconS
- ✓ Deals with Illumina and 454 NGS meta-barcoding data

Available at:

- ReCaS datacenter (<http://recasgateway.ba.infn.it/>)
- LifeWatch Italy portal (<http://www.servicecentrelifewatch.eu/biomas>)

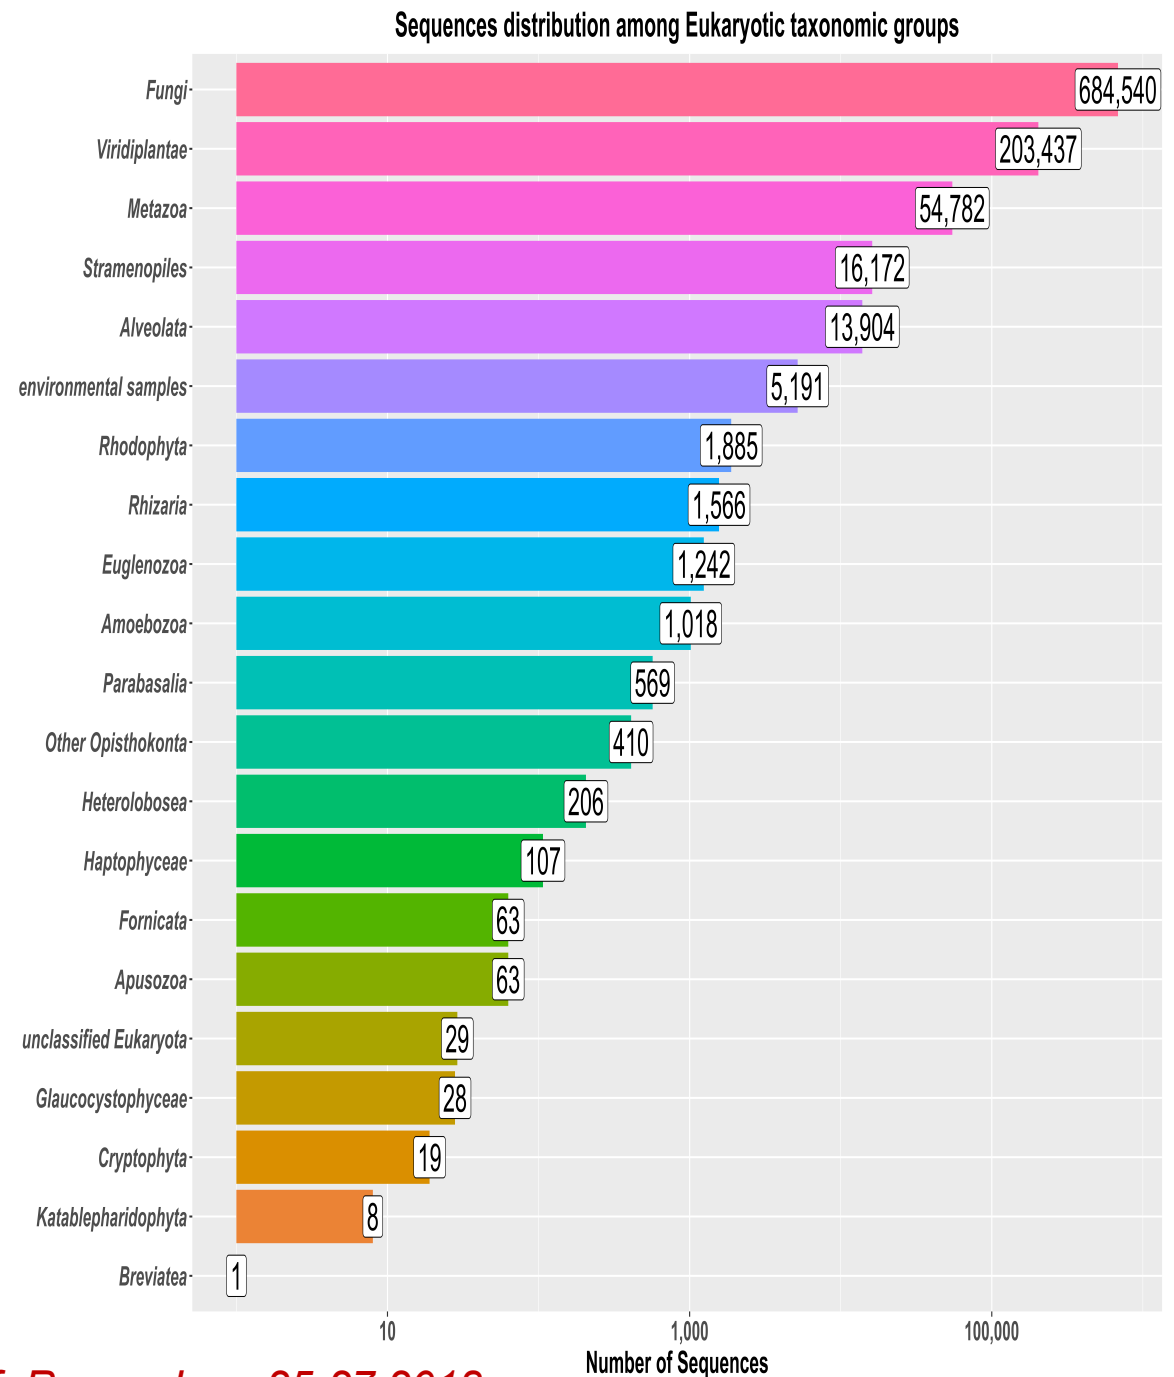

- A comprehensive collection of eukaryotic ribosomal RNA Internal Transcribed Spacer 1 (ITS1) sequences
- A dictionary of common ITS1 synonyms was used to select the entries where ITS1 annotations were specifically present in **ENA** entries features tables
- Hidden Markov Model (**HMM**) profiles of ITS1 flanking (18S and 5.8S rRNA genes) are mapped on all the eukaryotic sequences (using HMMER) in order to validate and, eventually, refine boundaries location of this region

ITSoneDB contents

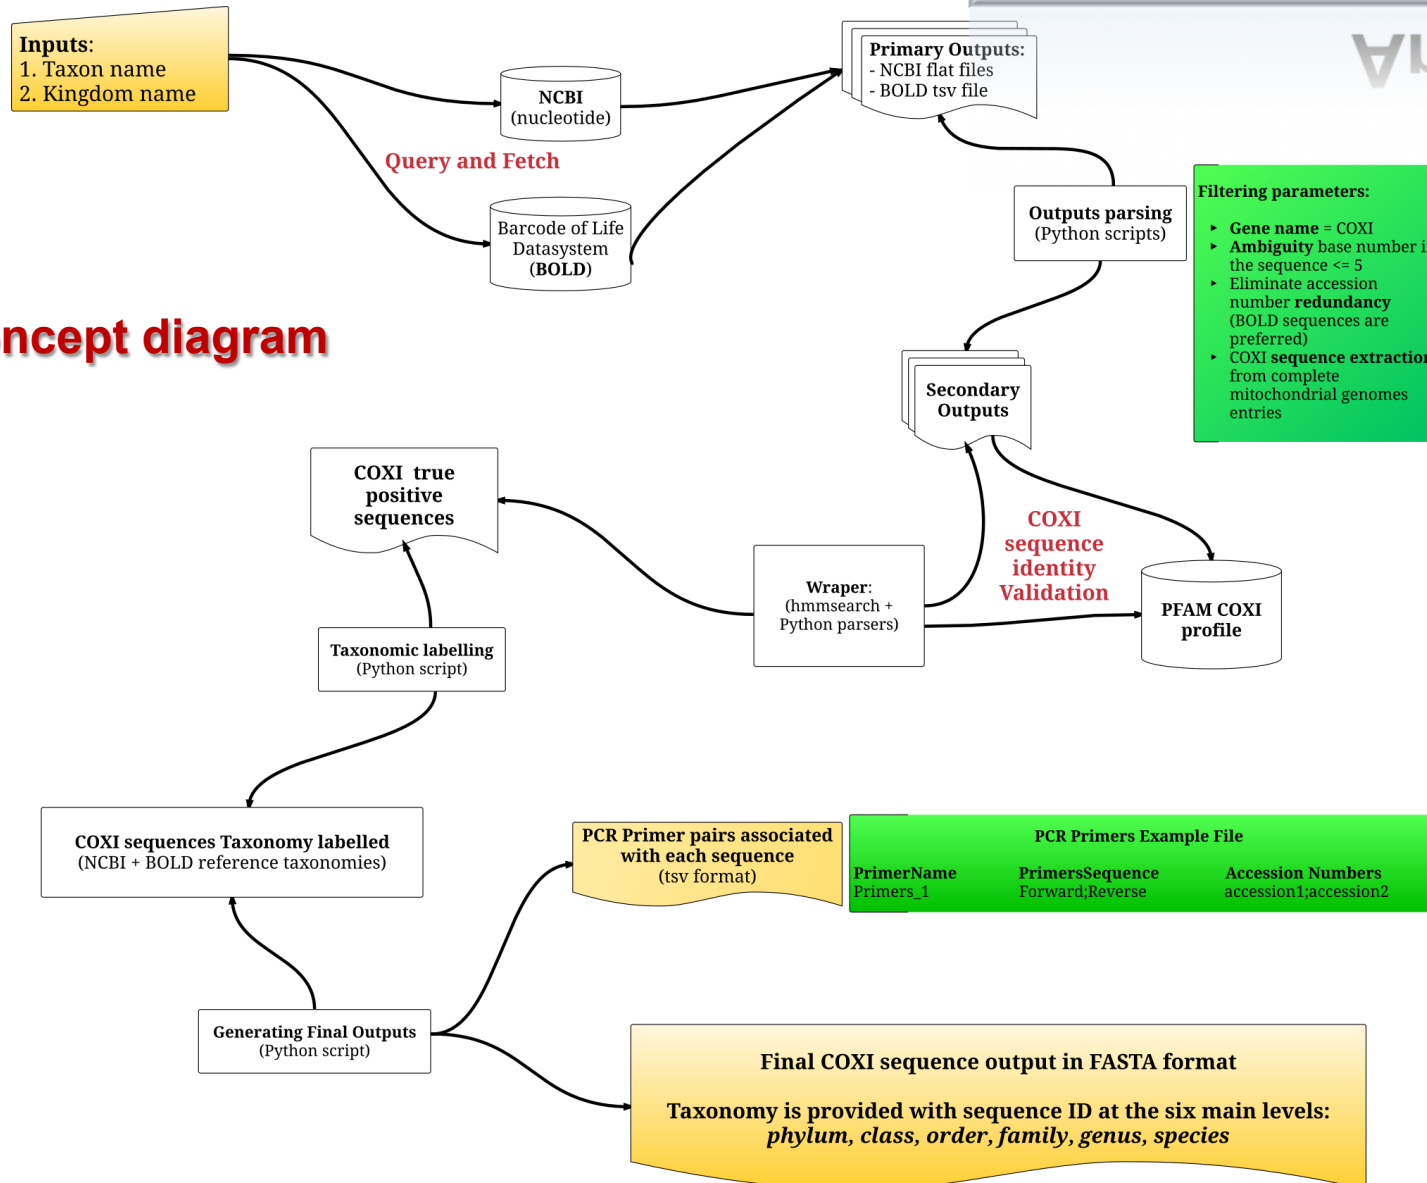

Availability: <http://itsonedb.cloud.ba.infn.it/>

Santamaria, M., *et al.* (2018) ITSoneDB: a comprehensive collection of eukaryotic ribosomal RNA Internal Transcribed Spacer 1 (ITS1) sequences, *Nucleic acids research*, **46**, D127-D132.

DNA Barcode Markers Retrieval: Animals & Plants

Concept diagram

Molecular markers

❑ Animals: **COXI**

❑ Plants: ***rbcL, matK, trnH-psbA***
