

LifeWatch Greece data-services

*On supporting metadata and semantic integration
for the biodiversity domain*

Nikos Minadakis, Yannis Marketakis, Chryssoula Bekiari, Martin Doerr, Nicolas Bailly, Alexandros Gougousis, Stamatina Nikolopoulou, Dimitra Mavraki, Christos Arvanitidis

Lecce, 9 June 2016

- 1. The Problem**
- 2. The Goal**
- 3. The Idea**
- 4. Preparatory face**
- 5. The Semantic Models**
- 6. Data Services**
- 7. User Interface / Examples**
- 8. Conclusions**

The problem

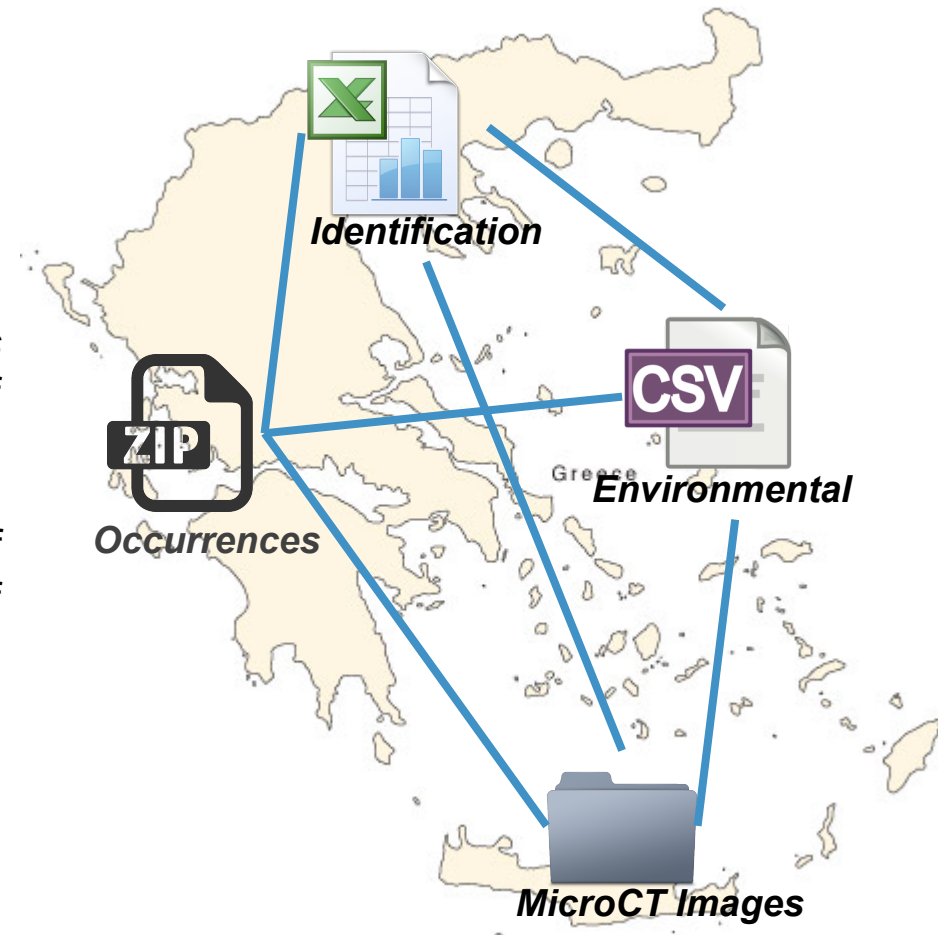

Main characteristics of biodiversity data:

1. Its ***cross-disciplinary character***.
2. The extremely ***broad range of data types*** and structures.
3. The variety of ***semantic concepts*** which encompasses.
4. It remains widely ***distributed*** and ***unconnected***.

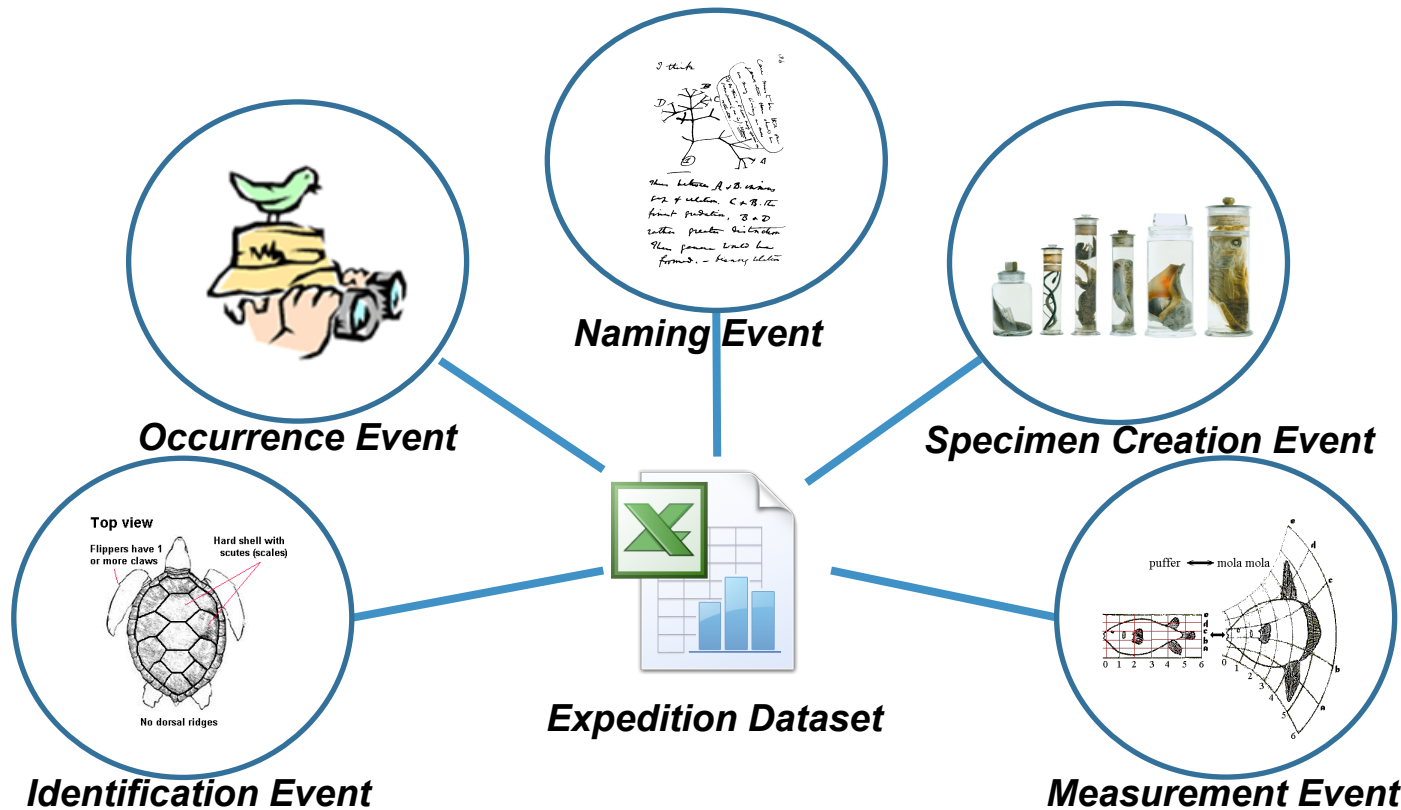

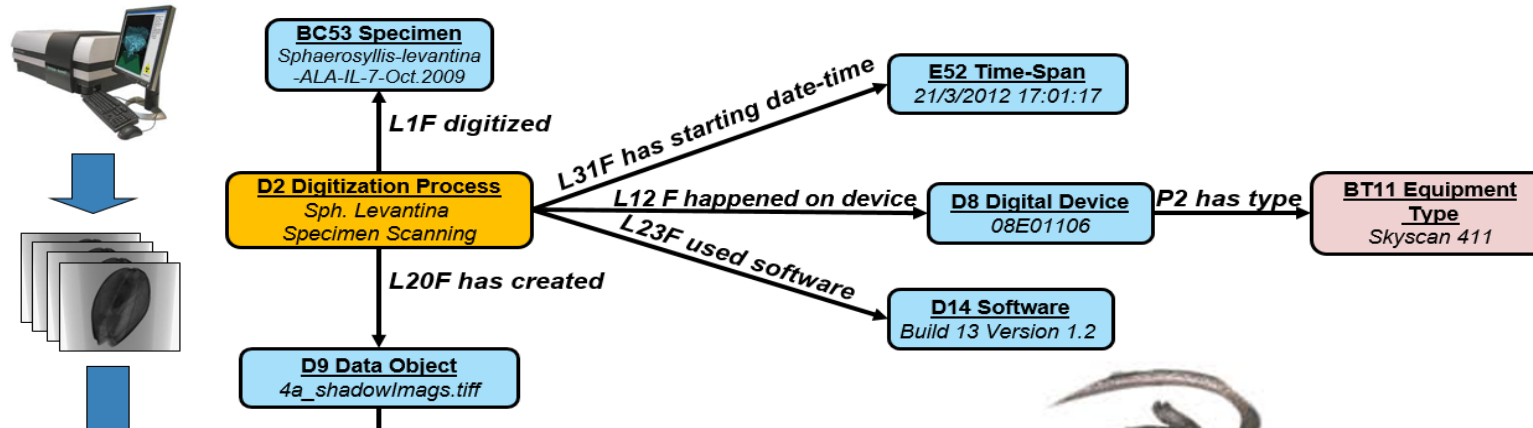

Our **goal** in the context of LW Greece:

1. **support cataloguing and publishing** of all the relevant meta-data information of the Greek biodiversity domain.
2. **integrate data from heterogeneous sources** by supporting the definitions of appropriate models.
3. **efficiently discover biodiversity data** of interest and enable the answering of complex queries that could not be answered from the individual sources.

Exploit the events' information that is explicitly or implicitly contained in the datasets, **model the different concepts and entities** of the biodiversity domain and **take advantage of the semantic graph's** capabilities to navigate efficiently through the different contents and **discover data of interest**.

The Semantic Models

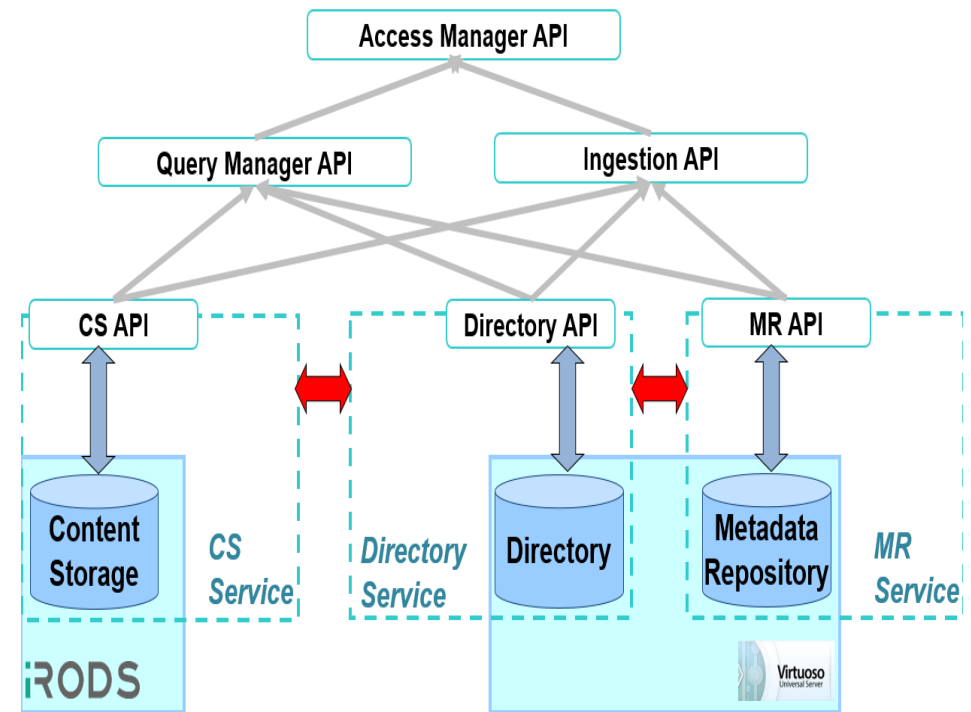

- **CIDOC CRM**: provides definitions and a formal structure for describing the implicit and explicit **concepts and relationships** used in cultural heritage domain, that can be applied effectively to a variety of domains such as **biodiversity, geology, etc.** (ISO 21127:2006).
- **CRMsci** is a formal ontology intended to be used as a **global schema** for **integrating** metadata about scientific **observation, measurements** and processed **data** in descriptive and empirical.
- **MarineTLO** aims at being a **global core model** that provides a **common, agreed-upon and understanding** of the concepts and relationships holding in the marine domain to enable knowledge sharing, information exchanging and integration between heterogeneous sources covers with **suitable abstractions** the marine and the terrestrial domain to enable the most fundamental queries,

Design and Implementation

- *3 Components Architecture:*
 - 1) **Directory Service**
 - 2) **Metadata Repository**
 - 3) **Content Storage**

- *More than 20 Web Services.*
 - 1) Publishing Metadata/Data
 - 2) Searching Metadata
 - 3) Discovering Data
 - 4) Browsing Services
 - 5) Mapping Services
 - 6) Transforming Metadata/Data
 - 7) Annotation Services

- The **Web Application** that is hosted by the LifeWatch Greece's Portal making all these functionalities available to the LifeWatch users.

Scientific Name

Alburnus thessalicus

Search

The *Alburnus thessalicus* species belongs to the *Alburnus* genus, *Cyprinidae* family, *Cypriniformes* order, *Actinopterygii* class, *Chordata* phylum and *Animalia* kingdom. *Alburnus thessalicus* was discovered by *Alexander I. Stephanidis* in 1950. Individuals that belong to this species have been occurred in *Greece, Italy, Spain* etc. Individual *alburnus_thessalicus_22* was transformed into *alb_thes_22_specimen* by *Sara Faulwetter* in 2015. *alb_thes_22_specimen* was scanned by *Niki Keklikoglou* in 2014 using a *SkyScan* MicroCT tomograph and results to the *alb_thes_scans.zip* dataset.

- **Recovery Mechanisms**
- **Update Functions**
- **Browsing Service**
- **Annotation Service**
- **Data Refinement Service**
- **Public Endpoints**

- ✓ First biodiversity fully semantic tech - based infrastructure.
- ✓ New Prototypical Architecture for e-science research infrastructure.
- ✓ Efficient data discovery.
- ✓ Exploitation of deductions and implicit knowledge.
- ✓ Implementation of web services, semantic models, e-services.
- ✓ Innovation and cross disciplinary scientific interest.

LifeWatch Greece Data-Services: On Supporting Metadata and Semantics Integration for the Biodiversity Domain. Minadakis, Marketakis, Bekiari, Doerr, Bailly, Gougousis, Nikolopoulou, Mavraki, Arvanitidis.

Ontologies and Linked Open Data in the LifeWatch Greece Research Infrastructure. Allocca, Doerr, Bekiari, Bailly, Minadakis, Marketakis, Mavraki, Nikolopoulou, Arvanitidis.
