

**ASSESSING HABITATS VULNERABILITY -
A MACROECOLOGICAL APPROACH WITHIN THE LIFEWATCH ITALY “ALIEN
SPECIES SHOW CASE”**

Cataldo Pierri

CNR_IBAF – ROMA, Department of Biology – BARI, LifeWatch Italia

**and P. Colangelo, C. Bergami, B. Balech, F. Cianferoni, S. De Felici,
N. Fiore, A. Oggioni, P. Tagliolato, I. Rosati, A. Boggero**

**LifeWatch Italy Annual Conference
Rome, 25-27 June 2018**

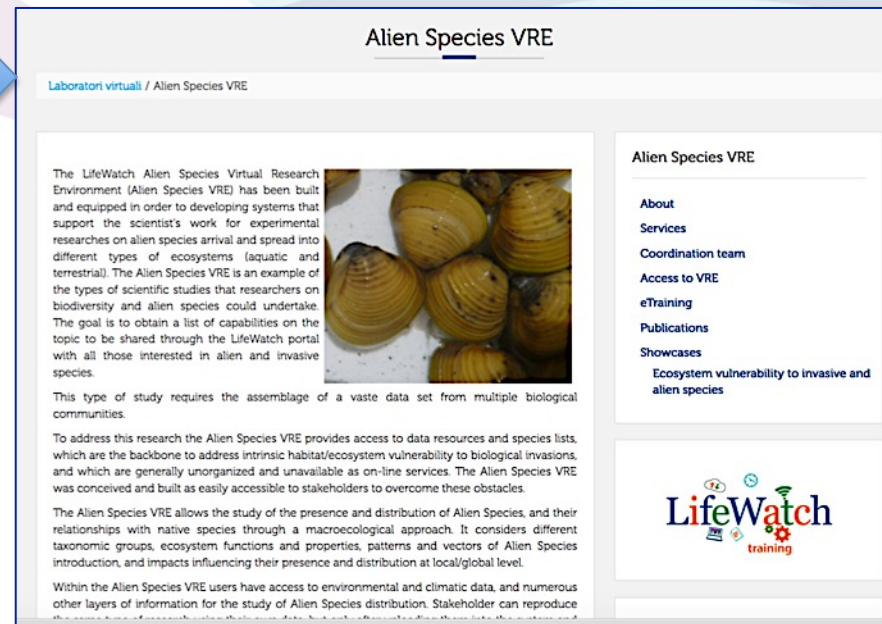

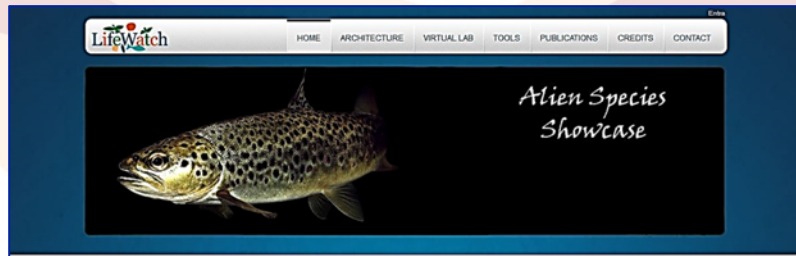

in collaboration with the Secretariat General of the Presidency of the Republic

Earth and Environmental Sciences are rapidly entering the new paradigm of large scale, data-intensive analytics to understand our complex and ever changing planet

AS are considered one of the major threat to biodiversity, even though their role is going to be reconsidered

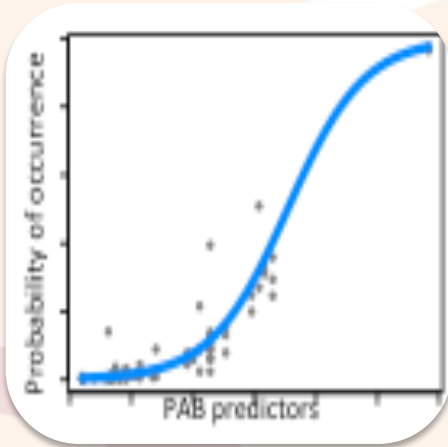

the case study of alien species LifeWatch has a core represented by a database of biotic resources (occurrence) and abiotic resources (linked to geo-referenced sites)

ICT group

a macroecological approach to invasion biology!

Habitat vulnerability

Are different systems/habitat more susceptible to invasion?

Invasion drivers

Which abiotic, biotic and pressure attributes of the recipient site affect invasion probabilities (presence/absence)?

Spread

Establishment

Colonization

Introduction

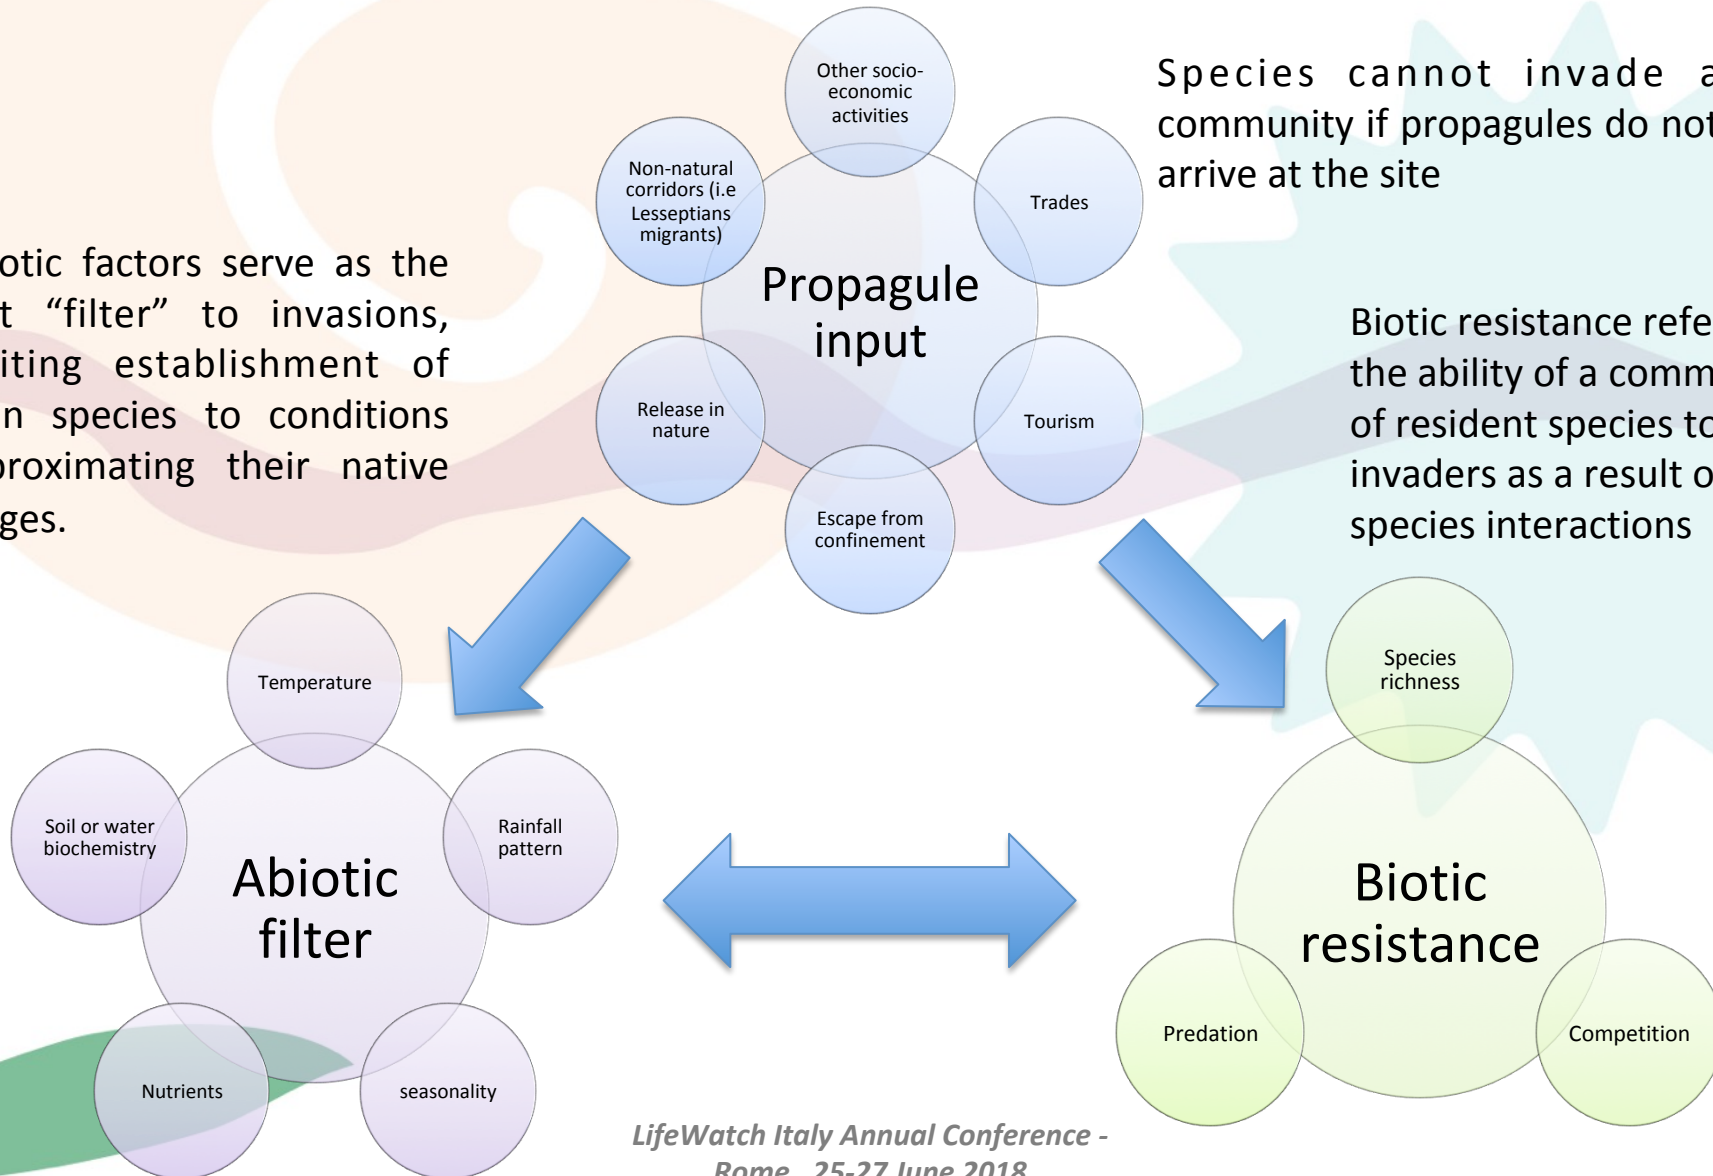

Identify emergent patterns regarding the potential drivers of alien species occurrence in freshwater/marine/terrestrial sites within a PAB framework

The Propagule, Abiotic, Biotic framework

Abiotic factors serve as the first "filter" to invasions, limiting establishment of alien species to conditions approximating their native ranges.

Species cannot invade a community if propagules do not arrive at the site

Biotic resistance refers to the ability of a community of resident species to repel invaders as a result of species interactions

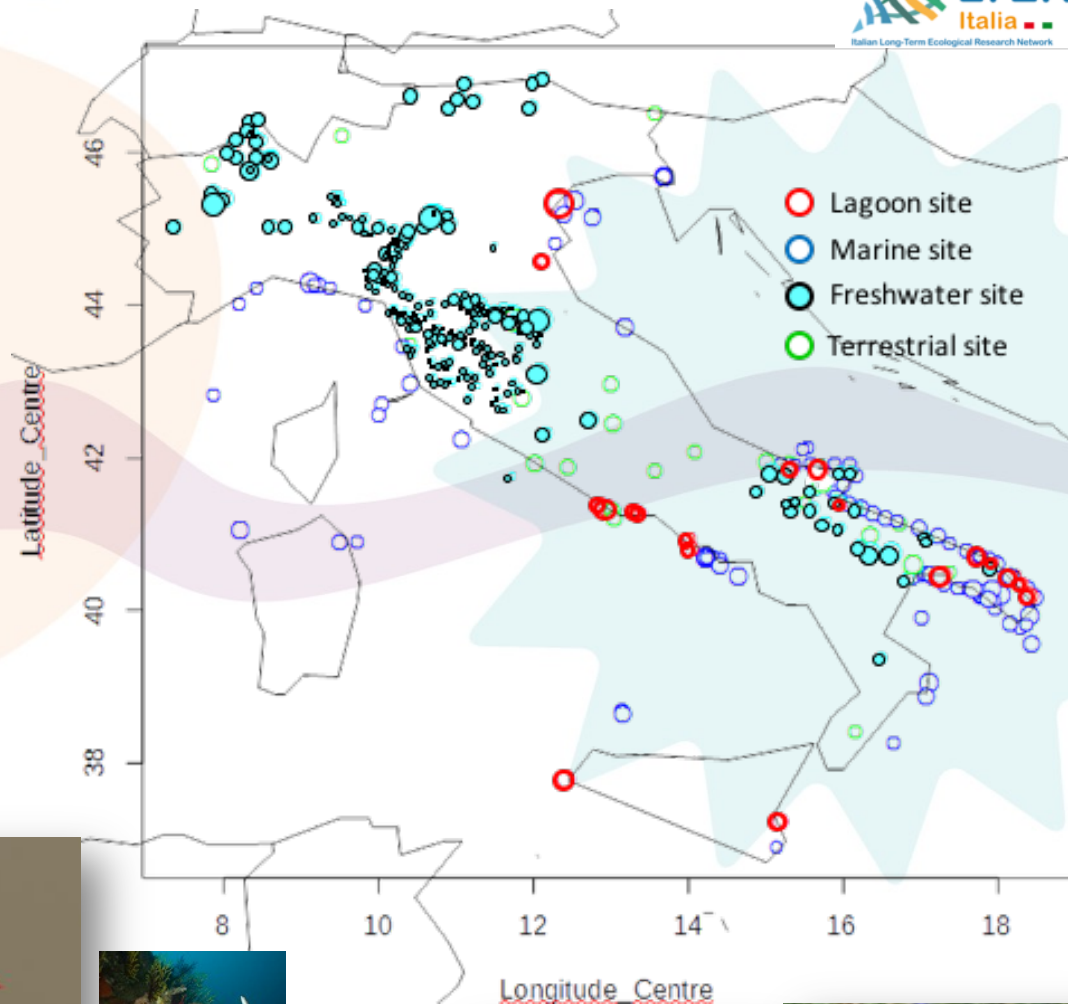

Data survey to ensure a good spatial and ecological coverage in Italy

34386 TOTAL OBSERVATIONS
12406 SPECIES
878 ALIEN SPECIES OBSERVATIONS
563 SITES
42 TAXONOMIC (PHYLA) GROUPS
36 HABITATS (EUNIS LEVEL 2)
40 YEARS OF OBSERVATIONS

EUNIS covers all types of habitat types from natural to artificial, terrestrial, freshwater and marine.

DATA ARE NOTHING IF NOT ORGANIZED AND QUALIFIED

The available data are the real infrastructure

TOOLKIT

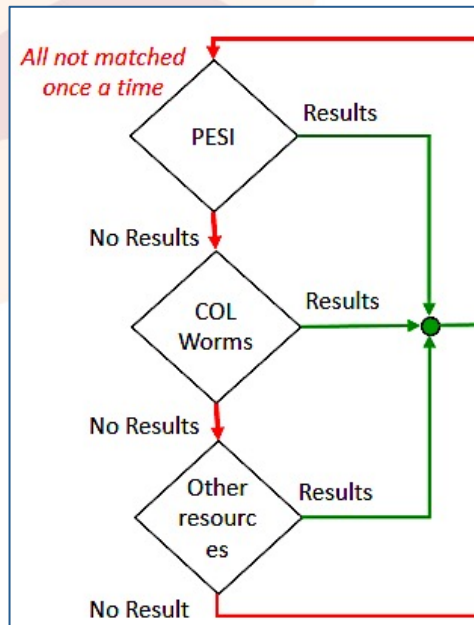

- 1) DATA UPLOAD (tool kit)
- 2) DATA STANDARDIZATION (mapping, Darwin Core)
- 3) QUALITY CHECK (LW data validation, Global Name Architecture)
- 4) DATA AVAILABILITY (harvesting, acces, my knowledge, remote desktop)

LifeWatch DATAPORTAL
